H. 2nd quarter 2014 projected collected interstate and international revenue  Lines 120b & 120c on February 2014 form 499Q
I. 3rd quarter 2014 projected collected interstate and international revenue  Lines 120b & 120c on May 2014 form 499Q
J. 4th quarter 2014 projected collected interstate and international revenue  Lines 120b & 120c on August 2014 form 499Q

1. The first step in the True Up is to determine whether or not the company is de minimis for purposes of the A/Q True Up using the following formula:
   \[(499A \times .162000) - (499A \times .162000 \times .140052)\].
a. If the result is < $10,000, then the contributor is de minimis and any support mechanism charges billed to the filer ID for their four 499Q filings for 2014 are reversed.
b. If the result is > or = $10,000, then the contributor is NOT de minimis; continue to step 2.

2. The next step in the True Up is determining which FCC Contribution Factor and associated FCC Circularity Factor to use in the True Up Calculation. After determining which factor is applicable, it will be used to replace the "Average FCC Contribution Factor" in step 3.

a. Average of 2 highest FCC Contribution Factors and the associated average FCC Circularity Factor should be used if (499A) > (Q1 + Q2 + Q3 + Q4).
b. Average of 2 lowest FCC Contribution Factors and the associated average FCC Circularity Factor should be used if (499A) < (Q1 + Q2 + Q3 + Q4).
c. Average of all 4 FCC Contribution Factors and the associated average FCC Circularity Factor should be used if (499A) = (Q1 + Q2 + Q3 + Q4).

3. Using the inputs noted above, the A/Q True Up formula for calculating necessary Support Mechanism Credits or Adjustments is:

a. (499A) - (Q1 + Q2 + Q3 + Q4) = True Up Base
b. (True Up Base * Average FCC Contribution Factor) – (True Up Base * Average FCC Contribution Factor * Average FCC Circularity Factor) = Quarterly Credit or Adjustment
c. Quarterly Credit or Adjustment / 3 = Monthly Credit or Adjustment
